Senior Full Stack Engineer with 7+ years of experience building scalable backend systems, distributed systems, enterprise applications, and production-grade APIs across fintech, digital banking, enterprise SaaS, data governance, and educational platforms.

Specialized in Node.js, TypeScript, Python, React.js, microservices architectures, RabbitMQ-based distributed systems, REST/GraphQL APIs, Kubernetes deployments, CI/CD pipelines, and cloud-native backend systems with strong focus on scalability, maintainability, performance, and rapid product execution.

Experienced in shipping enterprise software used in production banking and organizational workflows, contributing across backend architecture, frontend systems, integrations, infrastructure, deployment workflows, and AI-assisted engineering practices.

Technical Skills

Category	Technologies
Backend Development	Node.js, JavaScript, TypeScript, NestJS, ExpressJS, FastAPI, Python, GraphQL, REST APIs, Microservices, SOA, RabbitMQ, Redis, Distributed Systems
Frontend Development	React.js, Redux Toolkit, RTK Query, Next.js, Angular, HTML5, CSS3, Tailwind CSS, Bootstrap
Deployment & DevOps	AWS, Docker, Kubernetes, Jenkins, GitHub CI/CD, Nginx, Production Deployments
Database	PostgreSQL, MSSQL Server, MongoDB, MySQL, Oracle
Database ORMs	Sequelize, Knex, Prisma, TypeORM, Mongoose, ODBC
Version Control	Git, GitHub, GitLab, Bitbucket
Testing & Documentation	Jest, Swagger, Confluence, Postman
AI-Assisted Development	Claude Code, OpenAI Codex, ChatGPT, AI-assisted debugging, rapid prototyping
Domains Worked	FinTech, Digital Banking, Open Banking, Data Governance, Enterprise SaaS, LMS, CMS

Engineering Approach

• Strong ownership mindset with focus on building and shipping scalable production systems and enterprise applications.
• Comfortable working across backend systems, frontend applications, infrastructure, integrations, deployment workflows, and debugging production issues.
• Product-oriented engineering approach with emphasis on maintainability, execution speed, practical engineering trade-offs, and delivering customer-facing impact.
• Experienced in AI-assisted engineering workflows for rapid prototyping, debugging, code review, and accelerated feature delivery in fast-paced engineering environments.

Professional Experience

Senior Full Stack Engineer — Basserah (Remote, Saudi Arabia)
August 2025 – Present
Designing and shipping enterprise-grade governance and collaboration modules for scalable data governance platform involving metadata workflows, lineage visualization, enterprise integrations, collaborative workspaces, and production-grade backend systems.

Software Engineer — Aion Digital (Remote, Bahrain)
February 2022 – March 2025
Contributed to scalable digital banking and personal finance platforms used in enterprise banking environments. Designed and shipped distributed backend systems, APIs, integrations, transaction-processing workflows, and production banking services powering customer-facing financial products.

NodeJS Developer — Viltco Technologies (On-site, Lahore)
October 2021 – December 2021
Worked on scalable backend APIs, integrations, feature implementation, and business workflows for Node.js-based production systems.

NodeJS Backend Developer — AKTCO-Khalifeh Advanced Est. (Remote, Jordan)
May 2020 – September 2021
Developed backend systems, Google APIs integrations, reporting systems, and LMS platform services supporting educational administration and production reporting workflows.

Freelance NodeJS Backend Developer
April 2019 – May 2020
Delivered backend systems, REST APIs, authentication workflows, third-party integrations, deployment pipelines, and scalable Node.js applications for multiple international client projects across business and educational domains.

Portfolio Projects

BayanatiHub – Enterprise Data Catalog Governance and Collaboration Platform

September 2025 – Present

Designed and shipped enterprise-grade governance, metadata management, lineage visualization, and collaboration modules for centralized data governance platform supporting organizational data operations and enterprise workflows. Built scalable APIs and enterprise integrations for Power BI, Qlik Sense, metadata connectors, pipeline systems, and Active Directory/ADFS authentication workflows, improving governance automation and operational visibility across departments.

Technologies:
React, Redux Toolkit, RTK Query, Tailwind CSS, React Flow, Socket.IO, Node.js, Express.js, Sequelize, MSSQL Server.

Ingage PFM – Personal Finance Management Platform

July 2023 – March 2025

Designed and shipped distributed backend systems powering transaction insights, budgeting systems, notifications, savings goals, and intelligent financial workflows used in enterprise banking environments. Worked across scalable microservices architectures involving service components, background processors, distributed messaging systems, and open banking integrations handling production financial workflows.

Technologies:
Node.js, Express.js, TypeScript, Python, RabbitMQ, Kubernetes, MSSQL Server, ODBC, REST APIs, Docker.

Rubix – Digital Banking Platform

February 2022 – June 2023

Designed and shipped backend services and banking workflows for enterprise digital banking systems supporting retail and corporate banking operations. Built scalable APIs and modules involving account management, payroll systems, transfer services, standing orders, beneficiary management, and back-office workflows used in day-to-day banking operations. Worked across interconnected microservices and distributed financial systems handling production banking workflows.

Technologies:
Node.js, NestJS, TypeScript, SOA, Microservices, GraphQL, Redis, Knex, MSSQL Server.

G-Reporting

May 2020 – September 2021

Built backend systems and Google APIs integrations for analytical reporting platform helping educational institutions manage reporting and analytics around Google Classroom and Google Sheets. Implemented reporting workflows, APIs, and integrations improving classroom reporting visibility and operational efficiency for educational administrators and institutions.

Technologies:
Node.js, ExpressJS, KeystoneJS, React.js, GraphQL, Google APIs, Redis, Swagger, PayPal Integration.

Queen Rania Teacher Academy (QRTA) Web Portal

September 2020 – December 2020

Developed backend systems and API integrations for Learning Management System (LMS) platform supporting online learning and educational management workflows. Implemented scalable backend services improving platform maintainability, functionality, and frontend-backend workflow coordination.

Technologies:
Node.js, ExpressJS, KeystoneJS, React.js, GraphQL, REST APIs, Redis.

Education

International Islamic University, Islamabad
Bachelor’s Degree in Software Engineering
